

Section A: The Problem Space (The “Why”)

Church youth leaders and organizers’ events lack attendance due to the uncertainty of what to expect. This leads to low event turnout and leaders and organizers not having reoccurring events or planning new events for the people of the church.

Section B: The Target Audience (The “Who”)

Youth leaders and church organizers who take time to plan and organize events for the youth and the people of the church.

Feasibility Check: I will interview one church organizer and two youth leaders at a local church on Sunday regarding their event turnouts.

Section C: The Hypothesis (The “What”)

A digital web tool that could help church leaders and organizers with uncertainty around events by providing clearer event information which could promote higher turnout.

Section D: The “Anti Scope” (The Boundaries)

I am NOT building a social page.

I am NOT building a event management system.

I am NOT building an official website for a church.
