

Section A: The Revised Project Brief

Problem Summary

Church youth leaders and organizers face declining attendance for church events because youth and church members experience uncertainty regarding event expectations. This lack of clarity creates low turnout and gives leaders and organizers discouragement regarding future events. The problem is not a lack of interest for events, but rather a lack of information or misinformation that leads to the purpose of the event unpredictable.

Segmented Audience

Primary: Youth leaders and organizers who are responsible for planning, promoting, and executing events.

Secondary: Youth and church members who are interested in going to organized events but decide against due to uncertainty.

Smart Objectives

1. Increase event attendance by 20% by providing clearer information leading up to the event.
2. Decrease the number of repetitive questions regarding the events sent to organizers by 50% using a standardized event-detail framework.
3. Increase the number of volunteers for events by 15% by reducing the workload for one person during the planning phase.

Section B: The “Anit-Scope” List (The Boundary)

- I am NOT building a social page.
- I am NOT building an official website for a church.
- I am NOT building a platform for use by multiple churches.

Section C: The “Ambiguity Defense” (Reflection)

“Clearer”

- The word “clearer” is subjective and broad. What is clear for one person is not clear for another.
- The project must provide at least three specific event guidelines: dress code, activities, food and beverage.

“Higher”

- The word “higher” does not specifically provide the target or goal. It is providing an optimistic and hopeful mindset.
- Target a 20% increase in attendance on future events compared to previous events.

“Help”

- The word “help” is a broad verb that does not provide the intended goal. It is saying to fix the problem but not the HOW.
- To bridge the information gap by structuring event information.

Section D: The Final Problem Statement

How might we standardize the communication of event expectations for church youth leaders and organizers so that they can reduce uncertainty by members and increase event turnout.
